The asset allocation of the Fund, 31.05.2010

Hungarian T-bills	73.32%
Hungarian Government Bonds	14.66%
Corporate Bonds	9.21%
Government paper repo	1.32%
Current account	0.97%
Other assets	0.52%
Total investment assets	100.00%
Net corrected leverage	9.97%
Derivative products	0.00%

open market operations of the ECB were not able to completely restore the market confidence. The Hungarian assets have suffered even more: within a few days at the beginning of May, the forint weakened by 5 percent against the euro and the price of the Hungarian CDS widened by 100 basis points premium. The short forint yields have risen gradually as the market see decreasing probability of further rate cuts. Frustration between the new economic leadership and the central bank increases the uncertainty concerning the yield curve. The market monitors other economic ideas of the new government with slight distrust, which contain little details on news. We see minimal chance of further monetary easing in the current market sentiment, that is why the portfolio's duration has been cut.

Investment Policy of the Fund:

The AEGON Money Market Fund is a very useful investment possibility, which substitutes the classic time deposits. These funds worldwide offer their investors numerous advantages. Money market funds are very liquid, meaning investors can take money out of them on short notice. There is no penalty for taking money out of your money market fund, unlike time deposits. These funds offer competitive and stable yields at a very low risk. According to this, the fund is only allowed to hold very safe investments, like T-bills and Hungarian government bonds with durations lower than one year. Government debt securities are considered very safe because the government has the ability to raise taxes to meet its obligations. The portfolio manager always follows the all-time liquidity and gilt-edged market trends. Since the average duration of the fund is lower than one year, the volatility of the fund is also very low. It is much lower than the volatility of a bond fund, which can contain longer government bonds. The gross yield of the Fund should reflect the yield of the short-term government securities and the yield of the t-bills. We recommend the fund for those investors whose investment horizon is shorter than one year and/or want to run very low risk only. The Fund is also recommended for those who seek higher returns than the rates of the time deposits, but need quick access to their savings. It is ideal to hold the money inbetween investments or for investors who are looking for a so-called "safe haven" in case of market panics.
