Derivative products	0.00%

Market Summary:

Until the middle of July, the Hungarian markets were able to gain; both bonds and forint cleared their losses suffered at the end of June, moreover the EURHUF cross stayed below 280 for a few days. The favorable environment left off, after the negotiations between the Hungarian government and the IMF stopped and warnings have been issued by credit rating agencies. Forint depreciation, increase of yields made it clear, that the market is not happy about the news, but fortunately the negative sentiment was short lived, the markets were able to strengthen at the end of month. Money market yields, and forward rate agreements suggest possible base rate increase, hence our portfolio has lower risk than the benchmark. We have risen the weight of short mortgage papers lifting the book yields of the portfolio.

Investment Policy of the Fund:

The AEGON Money Market Fund is a very useful investment possibility, which substitutes the classic time deposits. These funds worldwide offer their investors numerous advantages. Money market funds are very liquid, meaning investors can take money out of them on short notice. There is no penalty for taking money out of your money market fund, unlike time deposits. These funds offer competitive and stable yields at a very low risk. According to this, the fund is only allowed to hold very safe investments, like T-bills and Hungarian government bonds with durations lower than one year. Government debt securities are considered very safe because the government has the ability to raise taxes to meet its obligations. The portfolio manager always follows the all-time liquidity and gilt-edged market trends. Since the average duration of the fund is lower than one year, the volatility of the fund is also very low. It is much lower than the volatility of a bond fund, which can contain longer government bonds. The gross yield of the Fund should reflect the yield of the short-term government securities and the yield of the t-bills. We recommend the fund for those investors whose investment horizon is shorter than one year and/or want to run very low risk only. The Fund is also recommended for those who seek higher returns than the rates of the time deposits, but need quick access to their savings. It is ideal to hold the money in between investments or for investors who are looking for a so-called "safe haven" in case of market panics.
