Current account	0.11%
Other assets	0.03%
Total investment assets	100.00%
Derivative products	0.00%
Net corrected leverage	94.99%

## Investment Policy of the Fund:

The Fund's objective is to establish an investment portfolio with a "total return" perspective – to achieve positive return for the investor under any circumstances. The Fund attempts to reach this goal by selecting - subsequent to the application of different ways of analysis - those asset classes that bear the highest potential for appreciation. Investments are performed through the purchase of investment Fund's units and collective investment securities. According to the professional consensus, 40 percent of the return of a given portfolio is determined by the selection of the asset classes. With regard to this, one of the most important steps in carrying out investment activity is the selection of the appropriate asset class, which requires increased awareness, market experience and deeper analysis, forecasting capability, and last but not least an immense amount of time. These capabilities and resources can be found, naturally, among professional investors, and consequently it is them who make and carry out those decisions that result in the highest profit with the most advantageous risk/reward ratio. To achieve a continuously positive return the Fund actively uses risk management procedures, primarily so-called

„stop-loss” procedures. Further, the sizes of positions that bear higher risk are selected with the utmost care. With the help of AEGON derivative Funds the AEGON Smart Money Investment Fund of Funds will have the opportunity of „short-selling” and thereby the ability to realize positive returns not only in rising markets, but in falling ones as well. The Fund primarily invests its capital into the investment funds, managed by AEGON Hungary Fund Management Co., but it is also allowed to invest into other investment funds, or purchase collective securities for its portfolio with the objective of diversification, or if the given asset class should not be covered by the Funds of the Fund Management Co. Indirectly, the Fund is able to reach the total investment universe known today, through the units of the investment funds (bond market, money market, stock market, real estate market, private equity, derivatives and other regulated and OTC derivative products, commodity market products, currency, etc.) and realize investments on the domestic and international level as well. To assure liquidity, the Fund can hold government bonds and treasury bills issued in the name of the Hungarian State by the Hungarian Government Debt Management Agency and distributed within the framework of the PDS – the Primary System for Distribution of Government Securities – as well as bonds issued by the National Bank

of Hungary (Central Bank) and other money market instruments in its portfolio.

The Fund thus takes some heavy weight off the investor's shoulders, namely: the asset allocation between asset classes, and switching to the appropriate Fund. The Fund has no benchmark index, but wishes to achieve a positive return under any market circumstances.

Risc Scale

### Market Summary:

The Fund started the year with high stock exposure: 25% of the Fund has been invested into equity funds, 10% into Atticus Alfa, 10% into MoneyMaxx. The equity weight started to bear fruit at the beginning of January, but later the over-positioning and the macro readings (Chinese policy tightening, the increased risk of Greek debt default and announcements on US bank

regulation) put pressure on the asset class. As the risk aversion has increased, we have taken the opportunity at the monthly investment committee session at diminished the equity weight: AEGON Central European Equity Fund and AEGON Climate Change Equity Fund, AEGON Russia Equity Fund have been cut to 0%. Instead of them we have bought AEGON Bessa Derivative Fund. The Fund places short bets on the Polish stock markets and it is able to perform well, if the Polish stock index (WIG20) is going down. Other beneficial factor for the Smart Money, is that the AEGON Bessa Derivative Fund is PLN denominated, and we have a bullish view on the PLNHUF pair, meaning that this will positively affect the performance if the HUF depreciates against the PLN. Our current stock exposure is around 14%.
