## Investment Policy of the Fund:

The AEGON Fund Management Co. launched the AEGON EMMA Emerging Markets Bond Fund, so potential investors could profit from the high-yield environment of those developing countries in which the fund invests. Although these countries are developing ones, but their macroeconomic background is stable, and they are on a growth path. The anticipatory yield of the Fund is higher than the yield of a domestic bond fund, but the risk is also a bit bigger. A high yield, or "junk bond" is a bond issued by a country or a company that is considered to have higher credit risks. The credit rating of a high yield bond is considered "speculative grade", or below "investment grade". This means that the chance of default with high yield bonds is higher than for other bonds. Their higher credit risk means that "junk bond" yields are higher than bonds of better credit quality. Studies have demonstrated that portfolios of high yield bonds have higher returns than other bond portfolios, suggesting that the higher yields more than compensate for their additional default risk. The investment possibilities of the Fund are very wide, so the portfolio manager has a widespread financial leeway to build up an optimal portfolio. We target the utmost yield by taking the lowest risk. By taking investment decisions we use fundamental and technical analysis, and we certainly keep an eye on the market sentiment as well. Our investment decisions are supported by a special investment-planning model, which is filled up with all the important macroeconomic data and indicators, like the anticipated level of inflation in these countries, their GDP growth, their credit ratings and so on. The portfolio manager generates a so-called risk - yield map, by focusing on the anticipated macroeconomic environment, the anticipated yield curve, and the above-mentioned model. When the map is ready, those risk-yield pairs will be chosen out which are considered to be safe and offer relative high yield at the same time.

## The asset allocation of the Fund, 30.04.2009

Hungarian T-bills	16.46%
Hungarian Government Bonds	16.16%
International Bonds	0.00%
Government paper repo	19.95%
Current account	43.99%
Other assets	3.44%
Total investment assets	100.00%
Net corrected leverage	5.69%
Derivative products	0.00%

## Market Summary:

News about aggressive governmental interventions supported the risk appetite at the first week of the month. The IMF re-capitalization (decided at the G20 meeting) has stirred up the hopes that the liquidity injection could materialize on the emerging markets too. The favorable environment allowed us to close out our overseas exposure, thus the 50% of the portfolio is invested in emerging currencies, and the other 50% is in low yield forint instruments.

## NET Yield Performance of the Fund:

Time horizon	12 months*	2008 year
Net return of the Fund*	-1.49%	-16.10%
Benchmark performance**	27.36%	-3.70%
