Deposit	0.00%
Total investment assets	100.00%
Net corrected leverage	15.89%
Derivative products	0.00%

Investment Policy of the Fund:

The AEGON Fund Management Co. created Hungary's first EUR denominated total return fund, the AEGON EuroExpress Fund. The fund acts as "long-only", so it can only take long positions, but it is not allowed to take uncovered short positions to profit from the dropping prices. We launched this fund because a lot of our clients pointed out, that they don't feel experienced enough in the field of investment, so it is pretty hard for them to decide in which fund they should invest into. The constantly changing market situation generates also a big dilemma for the investors: when and how should they reallocate their portfolio? The AEGON EuroExpress Fund eases these needs, and takes the responsibility for taking the right investment decision for those private investors who can get familiar with low/moderate risk, and who are not too risk-averse. According to the opinion of the fund manager, our Fund is allowed to invest into any kind of Hungarian/International bond or equity and it can invest into currencies as well. The fund manager's financial leeway is very wide – certainly by paying maximal attention to the compliance with the law. The aim of the fund is to provide its investors with a good yield at low/moderate volatility. In other words: the Fund targets a high Sharpe-rate. The Funds benchmark is the main rate of the ECB (European Central Bank), which was effective on the first trading day of the year. The fund manager is allowed to hedge entirely, or partly the foreign exchange risk by using currency futures.

Market Summary:

In the beginning of March it was obvious that we had to liquidate the long positions in the Fund. We sold several ETFs, but we kept the earlier mentioned structured product which invests in the following insurance and reinsurance equities: Allianz, Münchener Rückversicherungs-Gesellschaft, ING, Swiss Reinsurance and AEGON. We believe that these stocks are very

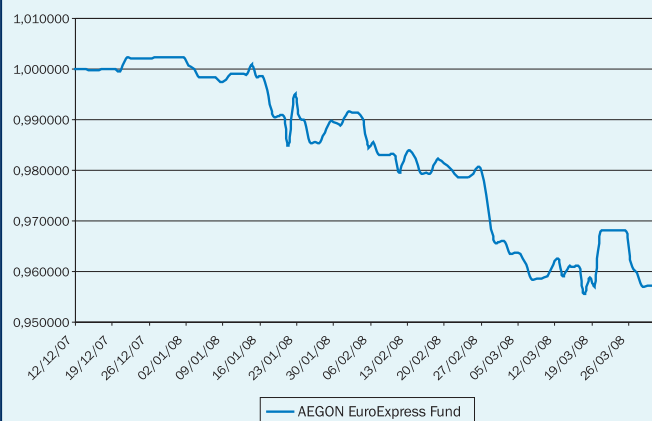

undervalued, and by keeping them, we could profit a lot in the future. In the middle of March – after the big price drops - we bought XLF ETF (The Financial Sector SPDR (symbol XLF) is an exchange-traded fund that tracks the performance of the S&P's financial sector index.) Markets calmed temporarily down because of Fed's actions, and also from actions from other central banks. It's also important to mention that the Hungarian government securities could be one of the best investment opportunities in the following period. According to our opinion the HUF can stay strong against the EUR, and the yields will fall in the future. We also expect a bear-market rally in the following 1–3 months. Certainly it's very hard to predict how long this rally will hold out, and what extent it will have, so investors should act very watchfully.

NET Yield Performance of the Fund:

Time horizon	3 months	From the Start*
Net return of the Fund*	-4.56%	-4.35%
Benchmark performance**	0.50%	0.60%

* It shows the net performance of the fund until 31/03/08
 The Fund was launched on 12/12/07
 ** The net return of the benchmark index.
