Net corrected leverage	13.29%
Derivative products	0.00%

Investment Policy of the Fund:

The AEGON Fund Management Co. created Hungary's first EUR denominated total return fund, the AEGON EuroExpress Fund. The fund acts as "long-only", so it can only take long positions, but it is not allowed to take uncovered short positions to profit from the dropping prices. We launched this fund because a lot of our clients pointed out, that they don't feel experienced enough in the field of investment, so it is pretty hard for them to decide in which fund they should invest into. The constantly changing market situation generates also a big dilemma for the investors: when and how should they reallocate their portfolio? The AEGON EuroExpress Fund eases these needs, and takes the responsibility for taking the right investment decision for those private investors who can get familiar with low/moderate risk, and who are not too risk-averse. According to the opinion of the fund manager, our Fund is allowed to invest into any kind of Hungarian/International bond or equity and it can invest into currencies as well. The fund manager's financial leeway is very wide – certainly by paying maximal attention to the compliance with the law. The aim of the fund is to provide its investors with a good yield at low/moderate volatility. In other words: the Fund targets a high Sharpe-rate. The Funds benchmark is the main rate of the ECB (European Central Bank), which was effective on the first trading day of the year. The fund manager is allowed to hedge entirely, or partly the foreign exchange risk by using currency futures.

Market Summary:

The Aegon EuroExpress fund reached a good performance in April. The main reason for this was that the fund held stocks in its portfolio. We kept the equity exposure under 20% in this way we could limit the risk of the portfolio. In the middle of March – after the big price drops - we bought XLF ETF (The Financial Sector SPDR (symbol XLF) is an exchange-traded fund that tracks the performance of the S&P's financial sector index.) At the end of April we sold our investments related to the financial sector with a big gain, but

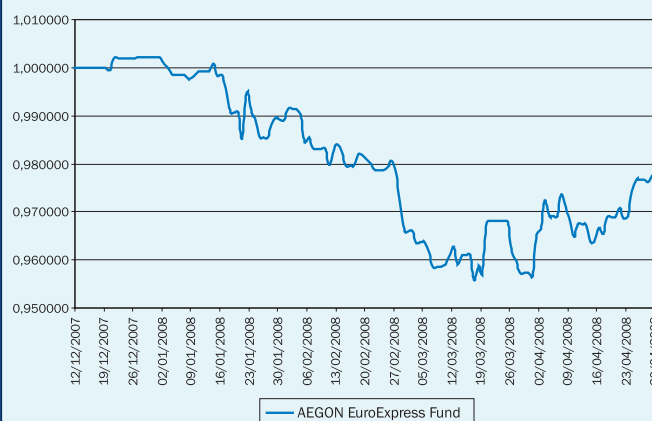

we kept the insurance and reinsurance stocks we bought some month ago. We also bought Hungarian government securities into the Fund. In the first week of April the Hungarian government securities market gradually calmed down after the panic of the past month. The yield levels had dropped significantly, what led to remarkable gain. This was followed by a consolidation in the market, the bond prices moved in a range, so the yield levels – which were born in the panic – could stay high. According to our opinion one of the best investment opportunities are the Hungarian government securities. (Certainly by focusing on the risks and the anticipated inflation.) We think that the price of the risky assets could still rise in the future, but this elevation will be sided with a significant climbing global inflation too. We consider this as a major risk factor, and we are planning to decrease our equity positions in the beginning of May in the portfolio of the Fund.

NET Yield Performance of the Fund:

Time horizon	3 months	From the Start*
Net return of the Fund*	-1.21%	-2.28%
Benchmark performance**	0.66%	0.77%

* It shows the net performance of the fund until 30/04/08
 The Fund was launched on 12/12/07
 ** The net return of the benchmark index.
