Net Asset Value (HUF): 210 207 906

Net Asset Value per share: 1.045100

Investment Policy of the Fund:

The AEGON Istanbul Equity Fund primarily targets the stock exchange-traded shares of companies that maintain an active presence in Turkey, or generate a substantial proportion of their revenues in the Turkish market. The Fund predominantly invests in equities, but its portfolio also contains Hungarian bonds and discount treasury bills, currencies and money-market products, to ensure the Fund's liquidity. The equity investments are usually denominated in foreign currency; however the fund may hedge some or all of the currency risk arising from these liabilities by concluding forward or option transactions. Although the Turkish market promises a high potential return, the value of investments may display a marked degree of fluctuation in the short term, and therefore it is advisable to treat the Fund as a long-term investment. The Fund Manager primarily bases its investment decisions on its own fundamental analyses, but it also makes use of the information and analyses provided by other investment service providers, banks and independent research companies, in the interests of reducing risks and maximising returns. The fund's benchmark: 80% DJ T120 index calculated in forint + 20% ZMAX index.

Market Summary:

In December of 2008 the international equity markets declined in HUF, as for example the MSCI World Index lost - 3.5% in HUF. However there have been positive divergences in the markets since 21st of November when the rejection of the bailout plan of the US automakers coincided with a market low. Mr. Madoff stopped that Santa-rally as his Ponzi-scheme helped disappear many millions (or billions) of USD from investors' pockets. Even major banks had expo-

The asset allocation of the Fund, 31.12.2008

International Equities	80.75%
T-bills	0.00%
Hungarian Government Bonds	0.00%
Government paper repo	18.66%
Current account	0.13%
Other assets	0.46%
Total investment assets	100.00%
Derivative products	0.00%
Net corrected leverage	80.75%

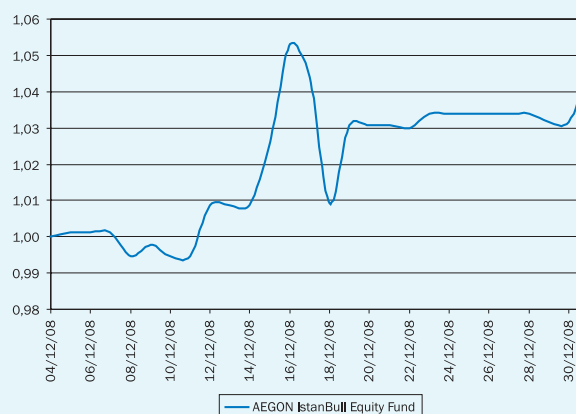

sure to Mr. Madoff's advisory activity. We believe that the valuation of the Turkish banks offer an excellent entry point into the equity market of Turkey. These financial institutes don't suffer from subprime losses, and they don't face lack of capital either. Certainly the Turkish economy can't be independent from the mainstream, but the lowering commodity prices will result a lower inflation too. The Turkish equity market closed 2008 with more than 50% loss, so we are pretty optimistic for the short term, but the market will stay very volatile. Mid- and long-term prices heavily depend on the economic stimulus packages of China and the ones of the developed countries. The American real estate market is also a key factor for the future.

NET Yield Performance of the Fund:

Time horizon	From the Start
Net return of the Fund*	4.51%
Benchmark performance**	1.78%
