Investment Policy of the Fund:

The AEGON Istanbul Equity Fund primarily targets the stock exchange-traded shares of companies that maintain an active presence in Turkey, or generate a substantial proportion of their revenues in the Turkish market. The Fund predominantly invests in equities, but its portfolio also contains Hungarian bonds and discount treasury bills, currencies and money-market products, to ensure the Fund's liquidity. The equity investments are usually denominated in foreign currency; however the fund may hedge some or all of the currency risk arising from these liabilities by concluding forward or option transactions. Although the Turkish market promises a high potential return, the value of investments may display a marked degree of fluctuation in the short term, and therefore it is advisable to treat the Fund as a long-term investment. The Fund Manager primarily bases its investment decisions on its own fundamental analyses, but it also makes use of the information and analyses provided by other investment service providers, banks and independent research companies, in the interests of reducing risks and maximising returns. The fund's benchmark: 80% DJ TI20 index calculated in forint + 20% ZMAX index.

Market Summary:

The climb of equity prices from early March continued in the last month too. The MSCI World Index made a 9% increase (in USD) however calculating in HUF it did not change (as an aftermath of the HUF appreciation). There were only slight changes in the leading world indices (S&P -3.1% , EuroStoxx50 +4.5%, Topix +2%). The Central and Eastern European region made a diverse performance in May, soaring oil prices pushed the Russian stock market +21.4% higher in HUF, the Turkish market performed also well (+7.4% in forint),

the average growth of Visegrad countries' (+1.1%) has fallen far behind from the region's (+7.8% in HUF). The technical aspects had the biggest effect on the global stock markets (high cash ratio, underweight positions in stocks, exaggerated pessimism among investor), which caused the sharpest price increase ever, in the last three months. We believe that the economy is not at the doorstep of recovery, what is priced on the markets now, but this is a sharp rebound from an economical shock dated back to the Lehman bankruptcy. The Turkish market can over-perform other regions in these turbulent times, as in case of a possible oil price decline, investor's can prefer TIR20 again, but we do not proclaim the possibility of a severe correction on this market neither, after the meaningful gains. We underweight equities in the Fund, in hope of better entry levels.

NET Yield Performance of the Fund:
