Net corrected leverage	7.14%
Derivative products	0.00%

Market Summary:

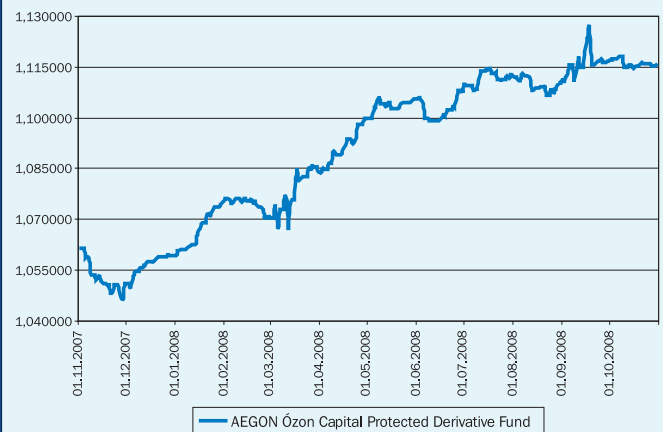

The performance of the fund was satisfactory in this instable environment. The markets are pretty hectic and investors suffered serious losses not just if they were invested in equity funds but also in Hungarian long bond funds. Although this fund was introduced exactly for this environment. It can perform well no matter what the circumstances are. Most of the fund's money was invested in short term Hungarian T-Bills to protect the investor money and we only took some risk via options as it is only allowed according to the investment policy of the fund. Right now the economic trends are very hard to predict so we will only take some risk if we see something that should happen with quite big probability.

NET Yield Performance of the Fund:

Time horizon	12 months*
Net return of the Fund*	5.13%
Benchmark performance**	4.23%

* It shows the net performance of the fund until 31/10/08
The Fund was launched on 19/03/07
** The net return of the benchmark index.

THE NET PERFORMANCE OF THE FUND BASED ON THE NET ASSET VALUE PER SHARE

Investment Policy of the Fund:

The aim of the fund is to give a capital-protected alternative investment opportunity which should enable clients to achieve access return without risking their capital. The structure of the fund itself gives the capital protection: At the beginning of every year, the Fund buys T-bills and keeps cash in repos and deposits which should cover its capital protection. The remaining part of the money is invested opportunistically in various options. The options are actively traded in a range of markets (FX, equities, futures) but since they can only be bought and sold but never written, this can not result in a big loss, so the capital protection can never be in danger. The capital protection means that on the first workday of every year the NAV of the Fund can not be less than at the first workday of the previous year. The investor, who buys the Fund any time during the year can be sure that on the first day of the next year the Fund's NAV will be at least as much as on the first day of this year. However, during the year, the Fund's NAV can vary widely. Another important feature of the Fund is that while most option-and Tbill based funds buy the options and keep them until expiry, we actively manage the portfolio, so the success (return) of the Fund depends on whether the Fund Manager's expectations turn out to be right.
