Government Paper Repo	4.95%
Current account	1.19%
Other assets	0.24%
Total investment assets	100.00%
Net corrected leverage	9.76%
Derivative products	0.00%

Investment Policy of the Fund:

The aim of the fund is to give a capital-protected alternative investment opportunity which should enable clients to achieve access return without risking their capital. The structure of the fund itself gives the capital protection: At the beginning of every year, the Fund buys T-bills and keeps cash in repos and deposits which should cover its capital protection. The remaining part of the money is invested opportunistically in various options. The options are actively traded in a range of markets (FX, equities, futures) but since they can only be bought and sold but never written, this can not result in a big loss, so the capital protection can never be in danger. The capital protection means that on the first workday of every year the NAV of the Fund can not be less than at the first workday of the previous year. The investor, who buys the Fund any time during the year can be sure that on the first day of the next year the Fund's NAV will be at least as much as on the first day of this year. However, during the year, the Fund's NAV can vary widely. Another important feature of the Fund is that while most option- and T-bill based funds buy the options and keep them until expiry, we actively manage the portfolio, so the success (return) of the Fund depends on whether the Fund Manager's expectations turn out to be right.

 high

Market Summary:

We were able to build up a government bond portfolio in line with the fund's investment policy, which allows us to keep the promised capital guarantee. We even successfully tested this guarantee with a model at this month: in an extreme year end scenario, when the domestic yields would jump due to an unforeseen problem to 40% (this is only a hypothesis, the extreme yield levels only needed to be introduced for modeling purposes). At the previous months,

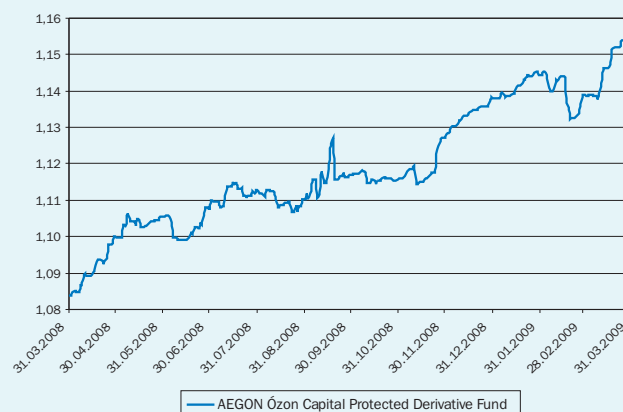

we wrote that the high price levels of the option and warrant premiums made difficult the purchase of speculative positions. The recent development is, these prices and premiums have declined a little bit, became cheaper, so it's worth to build up speculative positions now. Furthermore, we believe the high volatility of the market will keep up, and we give a big chance, that big and hectic up and down trends will breed again in the near future. According to the above, we will actively look for options, and trade them for profit making. We will focus on the stock markets, because other markets (bonds, currencies) pose high regulatory risks (like Central Bank interventions, bond buy-back auctions), which can immediately change the entire sentiment of the markets. Our aim is to minimize these effects and to outperform the money market yields with low risk-taking.

NET Yield Performance of the Fund:

Time horizon	12 months*	2008 year
Net return of the Fund*	6.26%	7.42%
Benchmark performance**	7.60%	7.05%

* It shows the net performance of the fund until 31/03/09
The Fund was launched on 19/03/07
** The net return of the benchmark index.
