Net corrected leverage	9.86%
Derivative products	0.00%

Investment Policy of the Fund:

The aim of the fund is to give a capital-protected alternative investment opportunity which should enable clients to achieve access return without risking their capital. The structure of the fund itself gives the capital protection: At the beginning of every year, the Fund buys T-bills and keeps cash in repos and deposits which should cover its capital protection. The remaining part of the money is invested opportunistically in various options. The options are actively traded in a range of markets (FX, equities, futures) but since they can only be bought and sold but never written, this can not result in a big loss, so the capital protection can never be in danger. The capital protection means that on the first workday of every year the NAV of the Fund can not be less than at the first workday of the previous year. The investor, who buys the Fund any time during the year can be sure that on the first day of the next year the Fund's NAV will be at least as much as on the first day of this year. However, during the year, the Fund's NAV can vary widely. Another important feature of the Fund is that while most option- and T-bill based funds buy the options and keep them until expiry, we actively manage the portfolio, so the success (return) of the Fund depends on whether the Fund Manager's expectations turn out to be right.

Risk Scale

Market Summary:

The international environment moved from the state of strong pessimism to a growing optimism in this month, followed with an extreme rally, a very big one, even on historical scale. On the foreign exchange, the carry-trade seems to return, which means the appreciation of higher interest rate currencies (AUD, NZD) in comparison with the lower interest rate currencies (CHF, JPY). Lower volatility is priced into the

warrants and options, posing advantage for their buyers. The Fund's increased investment activity had been promised in our monthly reviews earlier and, indeed it has been fulfilled. At the beginning of the month we sold our DAX short position as the market was very strong and has little hope, that the rising trend returns. EUR/USD call had been purchased instead, betting that the strengthening of the dollar will stop, as the currency won't act as a safe heaven any more. This position has been closed with small profit and we bought U.S. long maturity bond position with low leverage, enable us to make profit in case of a smaller correction. The positions were usually small, but we tend to increase the volume gradually providing additional value for our investors.

NET Yield Performance of the Fund:

Time horizon	12 months*	2008 year
Net return of the Fund*	6.02%	7.42%
Benchmark performance**	7.96%	7.05%

* It shows the net performance of the fund until 30/04/09
 The Fund was launched on 19/03/07
 ** The net return of the benchmark index.
