Government paper repo	0.00%
Corporate Bonds	14.37%
Mortgage Bonds	3.38%
Current account	0.83%
Other assets	10.34%
Total investment assets	100.00%
Net corrected leverage	12.58%
Derivative products	0.00%

points, but they are still gratuitously high. At its end-March policy meeting, the National Bank of Hungary (NBH) raised its base rate by 50 basis points (to 8.00%) instead of the 25 bps the market expected in order to signal its commitment to slowing inflation. We expect further rate liftings (25bps) in April. If the HUF stays strong maybe 8,25-8,50% could be the top, and this could mean the end of the rate lifting cycle. According to this, we expect that the yield level of the money market instruments will drop, since the extent of the monetary tightening seems to be overpriced. The AEGON Money Market Fund could act as a safe haven in the future, since the price volatility of the markets is still very high, and the international market sentiment is more than bearish.

Investment Policy of the Fund:

The AEGON Money Market Fund is a very useful investment possibility, which substitutes the classic time deposits. These funds worldwide offer their investors numerous advantages. Money market funds are very liquid, meaning investors can take money out of them on short notice. There is no penalty for taking money out of your money market fund, unlike time deposits. These funds offer competitive and stable yields at a very low risk. According to this the fund is only allowed to hold very safe investments like t-bills and Hungarian government bonds which duration is lower than one year. Government debt securities are considered very safe because the government has the ability to raise taxes to meet its obligations. The portfolio manager always follows the all-time liquidity and gilt-edged market trends. Since the average duration of the fund is lower than one year, the volatility of the fund is also very low, much lower than the volatility of a bond fund, which can contain longer government bonds as well. The gross yield of the Fund should reflect the yield of the short-term government securities and the yield of the t-bills. We recommend the fund for those investors whose investment horizon is shorter than one year and/or who wants to run very low risk only. The Fund is also recommended for those who seek higher returns than the rates of the time deposits, but need quick access to their savings. It is ideal to hold the money between investments, or for investors who are looking for a so-called safe havens in case of market panics.

Market Summary:

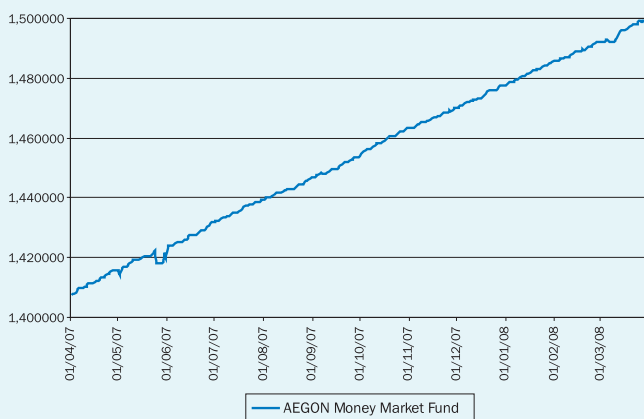

In March there was a serious yield pickup in the money market. The yield level of the 3-months Hungarian government security rose from 7.90% above 8.70% in the second part of the month. The 6-months T-bill yield rose from 7.85% to 8.70%, and the yield of the 1-year T-Bill rose from 8.15% to 9.15%. At the end of the month and in the beginning of April yields fell by 15-20 basis
