INVESTMENT POLICY OF THE FUND

The AEGON Istanbul Equity Fund primarily targets the stock exchange-traded shares of companies that maintain an active presence in Turkey, or generate a substantial proportion of their revenues in the Turkish market. The Fund predominantly invests in equities, but its portfolio also contains bonds and discount treasury bills, currencies and money-market products, to ensure the Fund's liquidity. The equity investments are usually denominated in foreign currency; however the fund may hedge some or all of the currency risk arising from these liabilities by concluding forward or option transactions. Although the Turkish market promises a high potential return, the value of investments may display a marked degree of fluctuation in the short term, and therefore it is advisable to treat the Fund as a long-term investment. The Fund Management primarily bases its investment decisions on its own fundamental analyses, but it also makes use of the information and analyses provided by other investment service providers, banks and independent research companies, in the interests of reducing risks and maximising returns. The fund's benchmark: 95% TR20I Index + 5% ZMAX Index.

MARKET SUMMARY

In June the determine factor of investors' activity was risk avoidance, therefore: US and German government bond yields decreased, USD strengthened whereas global equity markets and commodity prices dropped again. Greece CDS soared to record high, then turned down at the end of the month, when the Greek parliament passed the second authority bill.

Turkish market has slightly improved its performance since last month. The local stock exchange index showed a slight increase (+0,3%) calculated in domestic currency as long as calculated in HUF decreased 2% due to the strengthening of the Hungarian forint. The Turkish parliamentary election passed off positively for market sentiment however overheated growth and the relatively high current account deficit and worsening are negative signs. Investors expect further monetary and fiscal political austerity and became too pessimistic afterwards Turkish assets. In our opinion the current Turkish market sentiment is offering relatively good entry point for equities in medium and long term.
