INVESTMENT POLICY OF THE FUND

The AEGON Money Market Fund is a very useful investment possibility, which substitutes the classic time deposits. These funds worldwide offer their investors numerous advantages. Money market funds are very liquid, meaning investors can take money out of them on short notice. There is no penalty for taking money out of your money market fund, unlike time deposits. These funds offer competitive and stable yields at a very low risk. According to this, the fund is only allowed to hold very safe investments, like T-bills and Hungarian government bonds with durations lower than two years. Government debt securities are considered very safe because the government has the ability to raise taxes to meet its obligations. The portfolio manager always follows the all-time liquidity and gilt-edged market trends. Since the average duration of the fund is lower than half year, the volatility of the fund is also very low. It is much lower than the volatility of a bond fund, which can contain longer government bonds. The gross yield of the Fund should reflect the yield of the short-term government securities and the yield of the t-bills. We recommend the fund for those investors whose investment horizon is shorter than one year and/or want to run very low risk only. The Fund is also recommended for those who seek higher returns than the rates of the time deposits, but need quick access to their savings. It is ideal to hold the money inbetween investments or for investors who are looking for a so-called "safe haven" in case of market panics.

Total investment assets	100.00%
Net corrected leverage	100.35%
Derivative products	2.25%

MARKET SUMMARY

The market welcomed the newly appointed members of the Monetary Council, based on the first interviews we do not accept any sudden change in monetary policy but we need some more time to analyze the new balance within the body. Unsurprisingly, the base rate was left unchanged at the first meeting with the new members. The latest and upgraded inflation report showed that the 3% inflation target can be reached by the end of 2012 with an unchanged base rate. Money markets rates remained stable, only ultra short rates decreased with a couple of basis points. Demand for local assets does not subside, the successful placement of two dollar issues further boosted local market bond purchases, CDS decreased significantly and performance of the HUF was also very strong. One started to guess whether the NBH will be able to cut rates after the HUF rally, but this looks premature in our view as the currency should remain stable for a sustained period before any move. We should also consider that the ECB will probably start tightening monetary conditions in April, it is highly questionable if the MNBH can cut rates in the new environment.
