## INVESTMENT POLICY OF THE FUND

The AEGON Money Market Fund is a very useful investment possibility, which substitutes the classic time deposits. These funds worldwide offer their investors numerous advantages. Money market funds are very liquid, meaning investors can take money out of them on short notice. There is no penalty for taking money out of your money market fund, unlike time deposits. These funds offer competitive and stable yields at a very low risk. According to this, the fund is only allowed to hold very safe investments, like T-bills and Hungarian government bonds with durations lower than two years. Government debt securities are considered very safe because the government has the ability to raise taxes to meet its obligations. The portfolio manager always follows the all-time liquidity and gilt-edged market trends. Since the average duration of the fund is lower than half year, the volatility of the fund is also very low. It is much lower than the volatility of a bond fund, which can contain longer government bonds. The gross yield of the Fund should reflect the yield of the short-term government securities and the yield of the t-bills. We recommend the fund for those investors whose investment horizon is shorter than one year and/or want to run very low risk only. The Fund is also recommended for those who seek higher returns than the rates of the time deposits, but need quick access to their savings. It is ideal to hold the money inbetween investments or for investors who are looking for a so-called "safe haven" in case of market panics.

## MARKET SUMMARY

Central bank base rate remained unchanged in June. We do not see any inflationary pressure from the demand side, household consumption continues to decline, both this year's and next year's GDP growth forecasts were cut by the central bank.

The high country risk premium and the new waves of the still unsolved Greek debt issues do not seem to allow any monetary accommodation despite the HUF closing the month quite strong. Money market rates decreased further, yield of the 3-month bill decreased to around 5.80%, thanks to significant foreign buying.

We still hold short (on a money market horizon) bills combined with longer corporate exposure. The fund slightly underperformed its benchmark in June.
