INVESTMENT POLICY OF THE FUND

The AEGON Russia Equity Fund primarily targets the stock exchange-traded shares of companies that maintain an active presence in Russia or the other CIS states, or which generate a substantial proportion of their revenues in these countries. The Fund predominantly invests in equities, but its portfolio also contains bonds and discount treasury bills, currencies and money-market products, to ensure the Fund's liquidity. The equity investments are usually denominated in foreign currency; however the fund may hedge some or all of the currency risk arising from these liabilities by concluding forward or option transactions. Although the Russian and CIS market promises a high potential return, the value of investments may display a marked degree of fluctuation in the short term, and therefore it is advisable to treat the Fund as a long-term investment. The Fund Management primarily bases its investment decisions on its own fundamental analyses, but it also makes use of the information and analyses provided by other investment service providers, banks and independent research companies, in the interests of reducing risks and maximising returns. The Fund's benchmark: 95% RDX Extended Index USD + 5% ZMAX Index.

MARKET SUMMARY

Global equities tumbled in the first half of March, sending the MSCI World index to a 3 month low amid concern that worst earthquake on record and nuclear crisis in Japan may derail global economic recovery. While inflation concerns also increased on escalating turmoil in Middle East, equity markets bounced back in the second half of March. Valuations and fundamental drivers, such as earnings momentum and margins remain attractive despite the rising cost inflation, moreover fund flows remain supportive as asset allocation shift away from bonds in favour of equities. Russian equities outperformed in March again as oil&gas sector gained on high oil price. Gazprom surged more than 10% in dollar terms as rising demand for LNG spurred by energy shortages in Japan. Metal&mining sector also closed the month in positive territory as steel consumption trend continued to accelerate. After the strong performance of the Russian market, stocks trading at the most expensive relative valuations compare EM average since September 2008, although earnings estimates are climbing faster than average.
