Start:	2009.11.17
Currency:	PLN
Total Net Asset Value of the Fund:	226,904,456 PLN
Net Asset Value per unit:	1.720250 PLN

INVESTMENT POLICY OF THE FUND:

The AEGON Atticus Alfa Derivative Fund is able to invest in practically "everything", according to the anticipation of the Fund Manager. The Fund invests mainly in equities, equity indices and opens forward currency positions, but it can also invest in commodity markets. This total return derivative fund represents more risk than our "long-only" total return fund, the Moneymaxx, since it can use double leverage by investing into derivatives and futures. In other words, the value of the positions of the Fund can be the double of its capital resources. The balance of the Fund might change by as much as 2%, should the price of the fund's assets change by 1%. Leverage has the potential to enlarge profits or losses by the same magnitude. The greater the amount of leverage on capital you apply, the higher the risk that you will assume. The Fund is allowed to take long positions and uncovered short positions, as well. According to this, the Fund can bet on a bullish market or on a bearish market situation, too. The investment policy of the Fund is very similar to the so-called global "macro hedge fund" which was made famous by George Soros's Quantum Fund.

MARKET SUMMARY:

Global equities remained under pressure for the most part of November as periphery jitters weighed on the market. Only the last day of November saw an upward correction as major central banks announced a joint action of easing USD liquidity conditions, which sparked an enormous relief rally in equities. The Fund kept its relatively high equity exposure in November based on compelling valuations as well as expecting that improving periphery yields will eventually trigger some year-end relief in equities.

ASSET ALLOCATION OF THE FUND ON 11/30/2011
