Start:	2002.09.25
Currency:	HUF
Total Net Asset Value of the Fund:	10,100,625,689 HUF
Net Asset Value per unit:	1.917700 HUF

## INVESTMENT POLICY OF THE FUND:

The AEGON Money Market Fund is a very useful investment possibility, which substitutes the classic time deposits. These funds worldwide offer their investors numerous advantages. Money market funds are very liquid, meaning investors can take money out of them on short notice. There is no penalty for taking money out of your money market fund, unlike time deposits. These funds offer competitive and stable yields at a very low risk. According to this, the fund is only allowed to hold very safe investments, like T-bills and Hungarian government bonds with durations lower than one year. Government debt securities are considered very safe because the government has the ability to raise taxes to meet its obligations. The portfolio manager always follows the all-time liquidity and gilt-edged market trends. Since the average duration of the fund is lower than one year, the volatility of the fund is also very low. It is much lower than the volatility of a bond fund, which can contain longer government bonds. The gross yield of the Fund should reflect the yield of the short-term government securities and the yield of the t-bills. We recommend the fund for those investors whose investment horizon is shorter than one year and/or want to run very low risk only. The Fund is also recommended for those who seek higher returns than the rates of the time deposits, but need quick access to their savings. It is ideal to hold the money inbetween investments or for investors who are looking for a so-called "safe haven" in case of market panics.

## MARKET SUMMARY:

The local fixed income market came under severe stress in November. Local fundamentals did not improve much and the government finally started to feel the pressure and announced that it would seek aid from the IMF. This was not sufficient to persuade Moody's of a significant shift in local economic policies and the rating agency cut Hungary's sovereign ratings into the non-investment grade category. This did not help local market sentiment which was already under pressure from global developments given the once again escalating Eurozone crisis. The forint reached near record levels, local market yields jumped and reached double-digit territory in the long end. We saw some failed short bill auctions and the strain quickly translated into rate hike expectations. Although market sentiment improved a bit by the end of the month, the central bank delivered 50bps of monetary tightening. Short yields closed the month 1% higher causing a negative monthly performance(-0,09%), but the fund beat the benchmark by 30bps.
