Start:	2009.11.17
Currency:	PLN
Total Net Asset Value of the Fund:	205,445,557 PLN
Net Asset Value per unit:	1.717958 PLN

INVESTMENT POLICY OF THE FUND:

The AEGON Atticus Alfa Derivative Fund is able to invest in practically "everything", according to the anticipation of the Fund Manager. The Fund invests mainly in equities, equity indices and opens forward currency positions, but it can also invest in commodity markets. This total return derivative fund represents more risk than our "long-only" total return fund, the Moneymaxx, since it can use double leverage by investing into derivatives and futures. In other words, the value of the positions of the Fund can be the double of its capital resources. The balance of the Fund might change by as much as 2%, should the price of the fund's assets change by 1%. Leverage has the potential to enlarge profits or losses by the same magnitude. The greater the amount of leverage on capital you apply, the higher the risk that you will assume. The Fund is allowed to take long positions and uncovered short positions, as well. According to this, the Fund can bet on a bullish market or on a bearish market situation, too. The investment policy of the Fund is very similar to the so-called global "macro hedge fund" which was made famous by George Soros's Quantum Fund.

MARKET SUMMARY:

Global risky assets soared throughout January to levels not seen since the August meltdown. The rally was fuelled by prolonged excess liquidity conditions as well as a set of strong US macro and corporate data released. The US earnings season delivered a positive message as two-thirds of the reporting companies surpassed analyst expectations on the net profit level. The fund started the year in substantial foreign equity position, but its Hungarian exposure was very limited which helped to not even survive the severe sell-off in Hungarian assets well but it also made the opportunity to invest in Hungarian Government Bonds, convertible corporate bonds and to hedge the foreign assets against HUF at rarely seen levels. The fund managed to take profit partly on these investments while overall it still keeps higher risk position in its portfolio due to current favorable market environment which will be prolonged for the coming period based on current phase of economic cycle, valuation and positioning in our view.
