Net Asset Value of institutional series:	505,170,750 HUF
Net Asset Value per unit:	2.370644 HUF

INVESTMENT POLICY OF THE FUND:

The AEGON IstanBull Equity Fund primarily targets the stock exchange-traded shares of companies that maintain an active presence in Turkey, or generate a substantial proportion of their revenues in the Turkish market. The Fund predominantly invests in equities, but its portfolio also contains bonds and discount treasury bills, currencies and money-market products, to ensure the Fund's liquidity. The equity investments are usually denominated in foreign currency; however the fund may hedge some or all of the currency risk arising from these liabilities by concluding forward or option transactions. Although the Turkish market promises a high potential return, the value of investments may display a marked degree of fluctuation in the short term, and therefore it is advisable to treat the Fund as a long-term investment. The Fund Management primarily bases its investment decisions on its own fundamental analyses, but it also makes use of the information and analyses provided by other investment service providers, banks and independent research companies, in the interests of reducing risks and maximising returns. The fund's benchmark: 95% TR20I Index + 5% ZMAX Index.

MARKET SUMMARY:

In August, after the initial rise, the markets stagnated close to the peaks of March. The global macro picture shows a slowdown henceforward. The expectations concerning the introduction of the next QE as well as the bond-buying program intensified in August. At the end of the month Ben Bernanke emphasized the necessity of the QE, but he did not mention any specific measures, in spite of this the markets reacted positively. The price of precious metal rose during the month. Due to the unsolved exploitation at the North Sea, we saw a sharp Brent oil price correction, however the raw materials linked equities did not follow it. In August the Turkish market hit its new local peak. Since the beginning of the year the Turkish index has been among the best performing equity indices. The corporate results were better than expected especially in the banking sector. The Turkish lira started to depreciate and, if it remains permanent, it could put the stocks of the banking sector under pressure. During the month, Fitch held out the prospect of upgrading the status of Turkey to investment grade.

ASSET ALLOCATION OF THE FUND ON 08/31/2012
