INVESTMENT POLICY OF THE FUND:

Goal of the fund is to achieve higher return on EUR denominated savings than bank deposits. The fund has a broad money market mandate that mixes the EM expertise of the fund manager with the safety of traditional money market funds. The fund invests the bulk of its assets on fixed income markets and is not allowed to buy equities. Short term EUR denominated sovereign and corporate bonds represent the investment focus of the fund. The fund manager keeps total duration of the fund low to achieve low volatility, it can not be higher than one year. The fund purchases standard money market instruments but also exploits opportunities on the corporate and covered bond markets to achieve excess return. Quality is paramount: non-investment grade issues are exempt from the investment universe. This is a long-only fund with no leverage allowed.

MARKET SUMMARY:

Early September central bank decisions gave a further boost to markets. The new ECB OMT program decreased Eurozone tail risks while the Fed's QE3 could lengthen the horizon of the global low yield environment. Amid the good news bond spreads (EMBIG, CEMBI) sank to 1-1,5 year lows. Low yields and good sentiment was a good incentive for issuers to come to the market. September posted many records in this respect, a huge amount of bonds were sold on the primary market with corporate and sovereign issuers all very active. Although most deals were heavily oversubscribed as bond fund inflows remained resilient, secondary market reactions (widening spreads) show the market still has to absorb this supply. Our short tenor papers only appreciated minimally in September.
