Net Asset Value of PLN series:	61,921,923 PLN
Net Asset Value per unit:	1.938545 PLN

INVESTMENT POLICY OF THE FUND:

The AEGON Atticus Alfa Derivative Fund is able to invest in practically "everything", according to the anticipation of the Fund Manager. The Fund invests mainly in equities, equity indices and opens forward currency positions, but it can also invest in commodity markets. This total return derivative fund represents more risk than our "long-only" total return fund, the Moneymaxx, since it can use double leverage by investing into derivatives and futures. In other words, the value of the positions of the Fund can be the double of its capital resources. The balance of the Fund might change by as much as 2%, should the price of the fund's assets change by 1%. Leverage has the potential to enlarge profits or losses by the same magnitude. The greater the amount of leverage on capital you apply, the higher the risk that you will assume. The Fund is allowed to take long positions and uncovered short positions, as well. According to this, the Fund can bet on a bullish market or on a bearish market situation, too.

MARKET SUMMARY:

In January global business conditions kept on improving. The weakness of the eurozone eased due to the increase of German output volumes. The Chinese macro outlook improved further, purchasing activity and output rose, which signals broadening domestic demand. The S&P Index started the year better than ever since 1997 and Japan had an equally good start, since 1954 there hasn't been such a big increase. During the month we increased the equity weight in our portfolio and lowered the extent of national debt denominated in Hungarian forint. We almost absolutely hedged our foreign currency positions in HUF sell-off.

ASSET ALLOCATION OF THE FUND ON 01/31/2013
