Total Net Asset Value of the whole Fund:	2,255,852 EUR
Net Asset Value of HUF series:	183,511,401 HUF
Net Asset Value per unit:	0.853509 HUF

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

MARKET SUMMARY:

The leading indices continued to rise further in May and in the US markets new highs were hit during the month, at the same time DAX strengthened close to historical highs. In the second half of May stock exchanges reacted negatively on the news that the FED may lower the extent of monetary easing. The Chinese manufacturing data caused disappointment. The weakening domestic demand and the decline of new orders signal the slowdown of the economy. The leading Asian indices declined reacting on this news.

The climate change related stocks showed mixed performance. The alternative energy remained strong and primarily the wind and solar energy related companies continued to rush since the beginning of the year. The outstanding performance is thanks to the belief that after a 3 year market consolidation the pricing power could improve in these sectors which suffered a huge fall previously and the short positions which are closed in May. At the same time in the middle of the month there was a correction in the water management and agriculture related stocks.

ASSET ALLOCATION OF THE FUND ON 05/31/2013

Asset type	Weight
