MARKET SUMMARY:

Moves in the reporting period were driven by the global story of QE3 tapering: local fixed income markets experienced a huge collapse within three weeks but started to recover by the end of the month. This was caused by two effects: higher yields and weaker currencies shaved off several months of performance in the large benchmark indices which ignited large outflows from EM funds and the market was in search of a new level of risk premium in EM given the changing environment. Short yields also jumped higher somewhat as markets questioned whether the central bank will be able to cut rates amid the deteriorating sentiment and weaker currency.
