Net Asset Value of HUF series:	2,360,970,295 HUF
Net Asset Value per unit:	1.951932 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Russian equity market, and to profit from Russia's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund's portfolio primarily consists of the publicly issued shares of foreign companies. The main investment targets are the stock exchange-traded shares of companies that maintain an active presence in Russia or the former CIS states, or which generate the bulk of their revenues in these countries. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights, within the portfolio, of shares traded in the Russian market are determined with a view to ensuring that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

The correction which started in the middle of May persisted in June, primarily the investors worried that Fed is expected to lower the volume of the asset purchase program and it caused the cutback in the risky asset classes. The Chinese weak macro data signals further slowdown so it was not a supportive factor in recent sell-off. The leading equity markets fell by 5-10% during the month, DAX came back to 200 DMA, while S&P fell moderately. At the same time raw materials market showed mixed performance, crude oil closed the month without significant correction, however, the industrial metals and mining companies weakened during the month due to the Chinese slowdown and precious metals performed weak because of monetary austerity measures. USD started the month with weakening against leading foreign currencies, however, after the Fed two-day meeting it was strengthened significantly.
