Net Asset Value of institutional series:	574,043,457 HUF
Net Asset Value per unit:	2.429398 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Turkish equity market, and to profit from Turkey's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the stock exchange-traded shares of companies that maintain an active presence in Turkey, or that generate a substantial proportion of their revenues in the Turkish market. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. When determining the weights, within the equity investments, of shares traded in the Turkish market, we aim to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

Equity markets managed to recover following a substantial correction in June. Investors kept focusing on QE downsizing issues, tapering jitters, however, gradually faded as the relative lack of newsflow supported market sentiment. The S&P500 hit a new all-time high in July, while kept consolidating at record territory during the second half of the month.

The Turkish index underperformed the developed and the emerging markets average by 10 and 5 percent respectively in HUF terms. The Fed's program to lower liquidity had a negative effect on the markets. Yields increased further, Turkish lira remained in weak range and the outflow from the Turkish market was continued. The EPS expectations regarding the banking sector lowered because of the higher bond yields. The protest caused political crisis had an effect on macroeconomic processes. It is expected that the market won't be overperformer in the near terms.

ASSET ALLOCATION OF THE FUND ON 07/31/2013

Asset type	Weight
