Total Net Asset Value of the whole Fund:	42,306,105 PLN
Net Asset Value of institutional series:	42,301,683 PLN
Net Asset Value per unit:	1.136893 PLN

## INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Polish equity market, and to profit from Poland's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The fund's primary investment targets are the exchange-traded securities of companies that are active in Poland or that generate the bulk of their revenues there, or whose shares are listed on the Warsaw Stock Exchange. The fund may also invest in the shares of other Central and Eastern European corporations. These are listed as Austria, the Czech Republic, Hungary, Russia, Romania and Turkey; although the portfolio will always chiefly consist of the shares of companies listed on the Warsaw Stock Exchange. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, only publicly issued securities listed or in the process of being listed on the stock exchange will be purchased as equity investments. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights of the shares within the portfolio are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund holds more than 30% of its assets in a currency other than the domestic currency (HUF). In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

## MARKET SUMMARY:

Equity markets managed to recover following a substantial correction in June. Investors kept focusing on QE downsizing issues, tapering jitters, however, gradually faded as the relative lack of newsflow supported market sentiment. The S&P500 hit a new all-time high in July, while kept consolidating at record territory during the second half of the month.

In July the best performing market was Poland (7,3%) in the CE3 region. The Czech equity index closed 6,5% higher in the month and the BUX index dropped by 2,5% in HUF terms. The Polish macro data released in July signal the recovery of the economy. The leading indicators like PMI Manufacturing, economic sentiment, retail sales and industrial production improved further. The pension fund reform was put off and the final solution is likely to turn out in one or two month. In Poland the best performing sectors were food, media and bank. The loan activity growth signals a positive trend in the banking sector.
