INVESTMENT POLICY OF THE FUND:

The aim of the fund is to function as a stable, very low-risk investment vehicle, but to offer investors better returns than bank deposits. The portfolio elements are selected in accordance with these principles. To ensure liquidity the fund manager primarily aims to hold government bonds and discount treasury bills distributed by the State Debt Management Centre (ÁKK), and bonds issued by the National Bank of Hungary. The average duration of the assets in the portfolio is 6 months, and the average remaining life of the assets may not exceed 12 months. The fund is low-risk, but its portfolio may also contain forint-denominated debt securities issued by banks and corporations, which are expected to ensure a higher return than government securities. In the case of floating rate, forint denominated debt securities the average duration is equal to the number of days remaining until the next interest payment day. The fund may also invest its liquid assets in bank deposits. Besides this, the fund may hold a limited proportion of foreign-currency instruments in its portfolio, but only subject to the full hedging of currency risk.

MARKET SUMMARY:

Quarterly report on inflation contained new theoretical support to extend the rate cut cycle: the NBH lowered its 2014 inflation forecast by 80 bps. More importantly, the FED left the monthly amount of QE3 unchanged and continues to provide extra liquidity to global markets. The delay in tapering probably extends the Monetary Council's room to cut the base rate further, we believe it can reach 3%. The short end of the yield curve repriced quickly due to the changing global environment and parallel with the last 20 bps rate cut: yield of 3M-1YR T-Bills fell further, 3x6 FRAs hit a new record low of 3,24%, while short tenor EURHUF implied yields dipped at 2,5% this month. Before the price action we increased the duration in the Money Market Fund, which proved to be very successful.
