Net Asset Value of PLN series:	112,458,538 PLN
Net Asset Value per unit:	2.025891 PLN

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, technical and behavioural-psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

MARKET SUMMARY:

October started with a correction in the equity markets, the investors concerns was primarily based on the unsolved American budget problems. In the second half of the month the rally was continued due to the improving global macro picture and the equity-bond rotation and several indices reached historical highs. The FED tapering has been cancelled again, but at the same time equity and FX investors reacted sharply on the American macro data announced at the end of October and it caused intensive USD appreciation.

The Russian and Turkish exposure, the decline of the yield of Hungarian government bonds denominated in euro and the pharma (Richter, Egis) companies contributed to our performance positively.

ASSET ALLOCATION OF THE FUND ON 10/31/2013
