## INVESTMENT POLICY OF THE FUND:

The Fund's goal is to offer a stable and predictable yield at a low risk level for the investors. According to this the fund is only allowed to buy (hold) fixed income securities which were issued or guaranteed by Poland or by another member of the European Union. Issuer/guarantor should have a minimum rating of BB. The fund can invest 100% of its capital in Polish government bonds. Maximum exposure to another investment grade issuer should not exceed 20%, for lower ratings the limit is 10%. Maximum allowed duration of the fund is one year, 75% of the securities in the portfolio should have a maturity of maximum 2 years. The base currency of the fund is PLN, maximum weight of FX-denominated bonds is 50%. The fund aims to completely hedge its FX exposure. The fund can also place bank deposits.

## MARKET SUMMARY:

On monetary policy front it has not much changed: although the Polish economy is recovering faster than expected, there is a general agreement among MPC members that the reference rate should remain unchanged. This view was supported by a temporary solution for the US budget and debt ceiling concerns and delayed FED tapering, which sparked a huge rally in emerging market space. No rate hikes over the next months mean that the short end of the Polish curve remains well anchored: 9x12 FRA and the yield of the 2Yr government bond declined further this month. In a portfolio perspective, we got significant inflows to the fund, which allows us to trade with reasonable ticket sizes, and to diversify between more papers. Before the rally, we bought some 2Yr government papers and opened a position in 1Yr Bank Gospodarstwa Krajowego paper (which is guaranteed by the state) in order to improve the return profile of our fund. As discount margins of floating rate government papers widened unreasonable much, we opened a long position in the 5Yr FRN, which was successful as well. Other parts of the inflows were invested in Polish treasury bills and papers maturing in 2014.
