Total Net Asset Value of the whole Fund:	3,099,226 EUR
Net Asset Value of EUR series:	2,190,712 EUR
Net Asset Value per unit:	0.007397 EUR

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

 very high

MARKET SUMMARY:

The leading equity indices hit new highs again in November. The increase was supported by strong macro data and the rotation from bond to equity markets. The Chinese reforms had positive effects as well. These measures typically have an influence on longer term, but in short term the impact is likely to lag behind from last year's stimulus. Due to the upcoming FED tapering, USD strengthened further, however, in the second half of the month there was a break. The crude oil weakened thanks to the easing of the tensions in Iran, however, the pressure moderated in case of Brent oil due to the continuing production shortfall in Libya. In this weaker oil market environment, the climate change related stocks showed mixed performance. Alternative energy slightly lost momentum, however, waste management and agriculture related stocks performed well.

ASSET ALLOCATION OF THE FUND ON 11/30/2013
