Start:	07/09/2007
Currency:	EUR
Total Net Asset Value of the whole Fund:	3,147,273 EUR
Net Asset Value of EUR series:	2,178,107 EUR
Net Asset Value per unit:	0.007388 EUR

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

 5 years

Risk and Reward Profile:

very low  
 low  
 moderate  
 intermediate  
 significant  
 high  
 very high

## MARKET SUMMARY:

The leading equity indices moved in different path in the first part of December. While on the over-positioned European markets there was a correction due to the low liquidity, S&P500 and NASDAQ Composite were more resistant against profit taking. In the middle of the months markets welcomed the announcement that Fed will begin to cut back the monetary stimulus. The statement surprised the consensus and strengthened the view in case of growth prospects. The low liquidity Christmas season was considerably hectic. The leading equity indices hit new highs, the American dollar weakened 2-year low against the euro and due to liquidity tightening outlook the precious metals hit summer lows. The crude oil performed mixed in December. Brent closed the last month practically unchanged, while WTI strengthened a lot from depressed November levels. The climate change related stocks started the month with a substantive fall but after the Fed announcement they came back to November levels. From individual sectors, alternative energy performed weaker in December after its excellent performance in 2013, while water and agriculture related stocks performed well.

## ASSET ALLOCATION OF THE FUND ON 12/31/2013

Asset type	Weight
International equities	93.57 %
