Net Asset Value of HUF series:	22,913,404,815 HUF
Net Asset Value per unit:	2.418335 HUF

INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

Risk and Reward Profile:

MARKET SUMMARY:

The Fed waited until the very end of the year with the anticipated announcement: the Fed will start to taper its quantitative easing by USD 10 billion in January. Timing seemed to be good: most EM markets did not depreciate, although the 10y US treasury yield climbed above 3% by the end of the month which might pose risks. Equity markets even rallied on the announcement. We increased equity weight in the fund, both DM and EM exposures. We also bought Turkish equities and we increased the weight during the political turmoil, although we were cautious with construction companies. We increased our EURUSD short. In bonds the month was more about profit realisation: we sold our long bond holdings in Slovenia after the better than expected results of the bank stress tests brought further spread compression.
