Net Asset Value of HUF series:	1,939,765,290 HUF
Net Asset Value per unit:	1.368249 HUF

INVESTMENT POLICY OF THE FUND:

The fund's investment objective is to provide investors with a higher return than that attainable in the domestic money market, primarily by investing in the bond market of the Central and Eastern European region. The fund's bond investments are mainly concentrated in the corporate and mortgage bond markets, but government securities issued in foreign currency are also potential investment targets. Forint-denominated Hungarian government securities are only held for liquidity management purposes. The fund may also buy into other investment funds that invest in the above markets. The achievement of a higher return than would be attainable in the Hungarian government securities market is made possible by the better diversification, the additional yield from the premiums of the bonds, and, in a favourable market environment, by the price gains resulting from the narrowing of the premiums. The fund's general risk level and the asset allocation between the three main areas of investment is determined on the basis of a regular market analysis and situational analysis relating to four main aspects (fundamentals, valuation levels, market sentiment, technical factors). The in-depth analysis is also an important factor in the selection of the individual securities by region, sector and interest risk. In the course of selecting the individual securities, a thorough financial analysis is also essential to determine the creditworthiness of the issuer. Risk management and the regular monitoring of the issuers are of key importance to the fund. When compiling the fund's portfolio we aim to achieve a moderate risk profile, primarily purchasing investment-grade securities. The fund only buys lower-rated instruments in limited proportions. The fund may only conclude derivative transactions for the purpose of hedging or ensuring an efficient portfolio structure. The fund may also hold unleveraged collective investments linked to derivative indexes. The fund also has the option of taking on a substantial currency exposure, which will ordinarily be fully hedged, although depending on market circumstances the fund may even have an open currency position. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields: 2.15 %
 Annualized standard deviation of the benchmark's weekly yields: 0.46 %

MARKET SUMMARY:

The Fed waited until the very end of the year with the anticipated introduction: after the FOMC meeting held in December, Ben Bernanke governor expressed that the Fed will start to taper its quantitative easing by USD 10 billion in January. As recent US macro data were stronger than expectation, market participants were not surprised of the timing of the announcement. Meanwhile in Europe the ECB left its benchmark rate at 0,25% in December. On the macro side, Eurozone PMIs are still consistent with the moderate growth that economists project, but manufacturing and production numbers were weak going into year-end, notably in Germany. As far as the yields are concerned, the US and German 10 year government bonds' have risen by 15 basispoints in the last month. The emerging market yield spreads were the beneficiaries of the announcement as the introduction of the start of the tapering finally happened. The sovereign and corporate yield spreads were both able to tighten in December in the emerging markets.

ASSET ALLOCATION OF THE FUND ON 12/31/2013
