Net Asset Value of R series:	1,504,690,233 HUF
Net Asset Value per unit:	1.040677 HUF

INVESTMENT POLICY OF THE FUND:

The fund's aim is to assemble an investment portfolio for its investors that is comprised of both Hungarian and international money and capital-market instruments, which the fund can optimise through ongoing dynamic asset allocation in order to attain the highest possible yield. The fund is a 'total-return fund', which means that instead of concentrating on just one subsector of the money or capital market, at any given moment it focuses its investments on the area that holds the promise of the highest possible return. Accordingly, the fund may hold government securities and discount treasury bills issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary, as well as bonds issued by the National Bank of Hungary, and also bank and corporate bonds that are low risk but are nevertheless likely to earn a higher return than government securities. Besides these the fund's portfolio may also contain shares listed on the domestic stock exchange and the bourses of OECD countries, as well as the government securities, bank and corporate bonds of OECD countries. The fund does not follow a fixed benchmark, and does not adhere to a permanent ratio of shares to bonds, but aims to constantly change this ratio within a broad range; indeed, it is also prepared to take on currency risk (just as international bond/equity funds tend to) through the purchase of international government securities and equities. At the same time, the fund maintains the option to hedge currency risks.

very low	low	moderate	intermediate	significant	high	very high

MARKET SUMMARY:

Markets stated the year poorly. Developed market equities traded sideways and started a correction after a long uptrend. Emerging equities remained weak as attractive valuations could not offset the effects of the negative newsflow (Turkey, Argentina, Ukraine, China). Depreciating emerging currencies did not help as well. Weaker FX was accompanied by rising rates in many countries, some central banks had to raise rates to get ahead of the curve and stop the meltdown. Fed continued the tapering as planned, emerging funds saw large outflows amid the tighter liquidity conditions. Safe haven assets like core market bonds produced the best performance this month in the negative sentiment. Our short bond holdings weighed on the fund's performance, as did the unhedged Turkish equity exposure. We increased the local government bond weight somewhat at higher yields, while the TRY exposure was hedged. We exploited the decrease in core market yields to open short duration positions which also hedges the interest rate risk of some of our sovereign holdings when correlations return to normal.

ASSET ALLOCATION OF THE FUND ON 01/31/2014
