Net Asset Value of EUR series:	97,209 EUR
Net Asset Value per unit:	0.920219 EUR

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields on equity markets in the Asian region, and to profit from the region's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund invests its capital in equity-type instruments of the target countries. The fund aims to create an opportunity for investors to invest in equity markets that are representative of the Asian economies. The most important target countries are Hong Kong, India, China, South Korea and Taiwan, but the fund also invests in the capital markets of other Asian countries. This may be achieved through the purchase of individual shares or through collective investment instruments. The fund plans to invest predominantly in the latter, and accordingly, it primarily buys into exchange-traded funds (ETFs) and open-ended public investment funds. In accordance with our obligation under law, we draw the attention of all investors to the fact that the fund is a fund that invests in other investment funds; in other words, in accordance with its investment policy it may invest more than 80 percent of its assets in investment fund shares or securities issued by other collective investment instruments. However, the fund's portfolio will not contain shares of any single investment fund in a weight of over 20%. The fund only invests in investment vehicles whose expense ratio is less than 2.5%, though it always strives to ensure that the overall average fee burden does not exceed 1%.

Risk and Reward Profile:

MARKET SUMMARY:

Following the weak start of the year, investors were more optimistic in February. S&P500 hit new high thanks to better than expected earnings season. There was an upward correction in the European equity markets too, however these indices didn't reach new highs and the released macro data showed less convincing picture. The latest Chinese macro data signal further weakening of the economy, the Shanghai Composite index closed the month in the red in USD terms. The Bank of Japan kept the asset purchasing program unchanged in the second half of February, but lengthened the current lending program to commercial banks which otherwise expire in March. The BoJ expanded the duration and the volume of the new program in order to support lending activity. The Japan equity market fell further during February mainly due to the weakening export figures and higher trade deficit.

ASSET ALLOCATION OF THE FUND ON 02/28/2014
