Net Asset Value of HUF series:	2,268,926,339 HUF
Net Asset Value per unit:	1.538187 HUF

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to provide investors with yields higher than those attainable in the money market, at low risk, through the purchase or sale of securities. The fund invests most of its available assets in domestic discount treasury bills and short-term government bonds - which have the purpose of protecting the investors' capital - while using the rest to purchase riskier instruments on spot and futures markets. Given its approach to the purchase of risky instruments, the fund falls into the category of absolute-return funds: it selects, from among the opportunities available in the domestic and international money and capital markets, the investments with the best expected yield/risk ratio. The fund management company, exercising all due care, based on its own judgement and decisions and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with the our expectations with regard to future risks and returns - achieves its objective in the long term. The Fund offers capital protection for first trading day of every year under special condition. The capital protection is ensured by the investment policy of the Fund. Aegon Ózon Capital Protected Fund must hold minimum 80% of its assets in HUF-denominated bonds issued by the members of European Economic Area.

## MARKET SUMMARY:

Despite the significant sell-off in the EM universe and the relatively weak HUF the National Bank of Hungary cut the base rate by another 15 basis points to a new record low of 2.70%. Market participants were surprised after the decision as consensus was 10bps, which was reflected in the EURHUF: our currency depreciated to 25 months high (well above 314). The reasoning in the Council's statement has not much changed: we do not see strong arguments underpinning the continuation of the rate cut cycle. However, after the panic at the end of January, global sentiment improved gradually and investors seem to be more "content" with the new level of the HUF. The short-term yields decreased in February, although the slope of the yield curve (also in the short end) is spectacularly higher than it used to be.
