Net Asset Value of R series:	711,744,327 HUF
Net Asset Value per unit:	1.085490 HUF

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, technical and behavioural-psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

## MARKET SUMMARY:

March turned out to be a rollercoaster month for equities. European markets sold off on news of the Russian occupation of Crimea peninsula sparking fears that an escalation of the conflict is imminent. However, probabilities of the worst-case scenarios ranging from an open military conflict to a set of prolonged retaliatory sanctions kept decreasing during the second half of the month which brought some relief. Even though the FED went on with downsizing the QE programme, US markets remained more resilient to the negative newsflow of the unfolding Ukraine crisis to further deteriorating China macro data. We bet on the strengthening of the HUF during the month. In the beginning of March we lowered the hedge of the equity exposure and kept higher equity weight, primarily through increasing the emerging market exposure. We changed a part of our emerging market exposure actively and in certain cases we built short positions. We lowered the euro denominated Hungarian government bonds' weight and bought longer duration dollar denominated government and corporate bonds.

## ASSET ALLOCATION OF THE FUND ON 03/31/2014
