Currency:	EUR
Total Net Asset Value of the whole Fund:	732,399 EUR
Net Asset Value of EUR series:	732,399 EUR
Net Asset Value per unit:	0.983016 EUR

## INVESTMENT POLICY OF THE FUND:

The fund aims to grow the euro-based savings invested in it through returns that exceed the interest rates attainable on bank deposits. The fund is a money-market fund with a broad investment policy, issued in euro, which combines the fund management company's emerging-markets expertise with the safety of classic money-market funds. The fund may invest in the investment instruments permitted by law, with special regard to the money and bond markets. The fund may not hold shares. The fund's investment focus is on short-term government and corporate euro bonds. In the interest of achieving a stable traded price and low volatility we keep the fund's interest risk low; the fund's average modified duration may not exceed one year. Besides traditional money-market instruments (treasury bills, government securities), the fund aims to ensure a higher yield than that of traditional money-market instruments by purchasing mortgage and corporate bonds, and by taking advantage of the premiums that these offer. When selecting these instruments the fund sets strict quality requirements, and may not hold securities that are below investment-grade or do not have a credit rating, except for bonds issued or guaranteed by the State of Hungary. The fund can only open long positions, and is not permitted to open uncovered short positions. It may only open forward contracts for the purposes of hedging or portfolio optimisation. The fund may not use leverage. The fund aims to choose as freely as possible among the opportunities available in the domestic and international capital markets, exercising the caution that is consistent with the fund's investment strategy. The fund records its assets in euro, and endeavours to fully hedge its exposures in other currencies.

## MARKET SUMMARY:

April was a generally positive month across the global fixed income markets. The US and German 10 year government bond's yield decreased by 10 and 8 basis points respectively during the month. The Italian and Spanish bonds continued their rally. The yields of the 10 year securities have reach all-time low levels, the Italian yield reached 3,06%, while the Spanish reached 3% by the end of the month. After the start of the Fed tapering in December and after the continuously deteriorating growth prospects of emerging market countries, investors shifted from bonds issued in these markets. However, with these concerns fading away market participants shifted back to these securities in the second quartile and hard currency emerging market bond yields managed to decrease by 15 basispoints in April. The euro and US dollar denominated Hungarian government bonds managed to profit in April as well. The National Bank of Hungary announced that it will transform its main policy facility. The aim is to shift funds from the two-week NBH bill into government bonds, thus decreasing the country's external vulnerability. With the expected increase in demand for government bonds denominated in Hungarian forint, the GDMA will have the possibility to finance the maturing foreign denominated government bonds with money coming from the increased demand and from the currency reserve of the National Bank. The prospect of decreasing supply of foreign denominated government bonds has created upheaval on the secondary market of these bonds.
