Net Asset Value of HUF series:	2,760,316,900 HUF
Net Asset Value per unit:	1.550130 HUF

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to provide investors with yields higher than those attainable in the money market, at low risk, through the purchase or sale of securities. The fund invests most of its available assets in domestic discount treasury bills and short-term government bonds - which have the purpose of protecting the investors' capital - while using the rest to purchase riskier instruments on spot and futures markets. Given its approach to the purchase of risky instruments, the fund falls into the category of absolute-return funds: it selects, from among the opportunities available in the domestic and international money and capital markets, the investments with the best expected yield/risk ratio. The fund management company, exercising all due care, based on its own judgement and decisions and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with the our expectations with regard to future risks and returns - achieves its objective in the long term. The Fund offers capital protection for first trading day of every year under special condition. The capital protection is ensured by the investment policy of the Fund. Aegon Ózon Capital Protected Fund must hold minimum 80% of its assets in HUF-denominated bonds issued by the members of European Economic Area.

## RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields: 1.27 %

Annualized standard deviation of the benchmark's weekly yields: 0.54 %

## MARKET SUMMARY:

On April 24, the NBH announced its new self-financing plan, in order to improve the foreign currency composition of government debt (with a shift toward forint financing), to promote the contraction in the NBH's balance sheet and to decrease the interest expenditures of the public sector, by stimulating the Hungarian banking sector to hold government bonds instead of two-week NBH bills. The HUF reacted with prompt but moderate depreciation. The Hungarian bond market seems to be well supported by this programme: although, GDMA will increase its HUF bond supply, the buying interest was overwhelming in the first auctions after the announcement, while FX issuance is expected to be delayed for a significant period. Finally, the National Bank of Hungary cut the base rate by another 10 basis points to a new record low of 2.5%. All in all, the short end of the yield curve fell significantly in April: yield of 3M T-Bills decreased by 30-35 bps to 2,4-2,5%, yield of 1Y T-Bills decreased by 40-45 bps to 2,6-2,7%, 3x6 FRA fell by 13 bps, 9x12 FRA dropped by 20 bps.
