Start:	07/16/2013
Currency:	HUF
Total Net Asset Value of the whole Fund:	17,130,384,836 HUF
Net Asset Value of R series:	397,908,721 HUF
Net Asset Value per unit:	1.065741 HUF

INVESTMENT POLICY OF THE FUND:

The fund's investment objective is to provide investors with a higher return than that attainable in the domestic money market, primarily by investing in the bond market of the Central and Eastern European region. The fund's bond investments are mainly concentrated in the corporate and mortgage bond markets, but government securities issued in foreign currency are also potential investment targets. Forint-denominated Hungarian government securities are only held for liquidity management purposes. The fund may also buy into other investment funds that invest in the above markets. The achievement of a higher return than would be attainable in the Hungarian government securities market is made possible by the better diversification, the additional yield from the premiums of the bonds, and, in a favourable market environment, by the price gains resulting from the narrowing of the premiums. The fund's general risk level and the asset allocation between the three main areas of investment is determined on the basis of a regular market analysis and situational analysis relating to four main aspects (fundamentals, valuation levels, market sentiment, technical factors). The in-depth analysis is also an important factor in the selection of the individual securities by region, sector and interest risk. In the course of selecting the individual securities, a thorough financial analysis is also essential to determine the creditworthiness of the issuer. Risk management and the regular monitoring of the issuers are of key importance to the fund. When compiling the fund's portfolio we aim to achieve a moderate risk profile, primarily purchasing investment-grade securities. The fund only buys lower-rated instruments in limited proportions. The fund may only conclude derivative transactions for the purpose of hedging or ensuring an efficient portfolio structure. The fund may also hold unleveraged collective investments linked to derivative indexes. The fund also has the option of taking on a substantial currency exposure, which will ordinarily be fully hedged, although depending on market circumstances the fund may even have an open currency position. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term.

RISK INDICATORS FOR THE LAST 12 MONTHS:

Annualized standard deviation of the fund's weekly yields: 0.83 %
Annualized standard deviation of the benchmark's weekly yields: 0.47 %

MARKET SUMMARY:

April was a generally positive month across the global fixed income markets. The US and German 10 year government bond's yield decreased by 10 and 8 basispoints respectively during the month. The Italian and Spanish bonds continued their rally. The yields of the 10 year securities have reach all-time low levels, the Italian yield reached 3,06%, while the Spanish reached 3% by the end of the month. After the start of the Fed tapering in December and after the continuously deteriorating growth prospects of emerging market countries, investors shifted from bonds issued in these markets. However, with these concerns fading away market participants shifted back to these securities in the second quartile and hard currency emerging market bond yields managed to decrease by 15 basispoints in April. The euro and US dollar denominated Hungarian government bonds managed to profit in April as well. The National Bank of Hungary announced that it will transform its main policy facility. The aim is to prod lenders to shift funds into government bonds, thus decreasing the country's external vulnerability. With the expected increase in demand for government bonds denominated in Hungarian forint, the government will have the possibility to finance the maturing foreign denominated government bonds with money coming from the increased demand and from the currency reserve of the National Bank. The prospect of decreasing supply of foreign denominated government bonds has created upheaval on the secondary market of these bonds.

ASSET ALLOCATION OF THE FUND ON 04/30/2014
