Net Asset Value of PLN series:	133,624,637 PLN
Net Asset Value per unit:	2.087161 PLN

## INVESTMENT POLICY OF THE FUND:

The aim of the fund is to achieve a substantial yield for investors by taking high risks and making active use of derivative positions. The fund is decidedly high-risk, particularly due to the derivative positions it takes. The fund is willing to buy or sell all available investment instruments - domestic and foreign bonds, equities and other securities, indexes and currencies - provided it sees the opportunity to make substantial gains. In this respect the fund belongs in the category of opportunistic funds that pursue a multi-strategy investment approach. Within the multi-strategy approach pursued by the fund, 'global macro', 'long-short equity', 'convertible bond arbitrage' and 'managed futures'-type transactions dominate. In terms of asset class, the fund's investments can be divided into three main groups: it takes on extra risk in the bond, currency and equity markets, and in these markets it is prepared to take up both long and short positions within the maximum limits permitted by law, which currently allow double leverage for funds of this type. In its investment decision-making mechanism the fund assesses fundamental, technical and behavioural-psychological factors. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term. To ensure liquidity the fund aims to hold government securities issued by the State Debt Management Centre (ÁKK) on behalf of the State of Hungary.

## MARKET SUMMARY:

Equity indices remained strong throughout May with both the S&P500 and the DAX breaking new all-time highs. Investors were less concerned about the negative newsflow coming from Eastern Ukraine and the escalation of the crisis to an open civil war, while the probability of tougher sanctions were gradually priced out from European markets. Economic indicators signaled a mixed picture with US economy regaining strength following the weather related issues, while most of the European macro data remained anemic. The US earnings season delivered mixed results as the S&P500 companies managed to beat the consensus on the bottom line level, but failed to surpass expectations in terms of sales.

At the end of the month we increased the equity weight in the portfolio, we closed gold long position and cut the Turkish equity exposure. The foreign currency denominated bonds added to our performance, while the positions against the HUF not performed well, but temporarily we didn't close that.

## ASSET ALLOCATION OF THE FUND ON 05/31/2014
