Total Net Asset Value of the whole Fund:	59,744,360 PLN
Net Asset Value of institutional series:	23,092,497 PLN
Net Asset Value per unit:	1.225302 PLN

## INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Polish equity market, and to profit from Poland's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The fund's primary investment targets are the exchange-traded securities of companies that are active in Poland or that generate the bulk of their revenues there, or whose shares are listed on the Warsaw Stock Exchange. The fund may also invest in the shares of other Central and Eastern European corporations. These are listed as Austria, the Czech Republic, Hungary, Russia, Romania and Turkey; although the portfolio will always chiefly consist of the shares of companies listed on the Warsaw Stock Exchange. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, only publicly issued securities listed or in the process of being listed on the stock exchange will be purchased as equity investments. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The weights of the shares within the portfolio are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund holds more than 30% of its assets in a currency other than the domestic currency (HUF). In accordance with the current legislation, the proportion of shares in the portfolio may be up to 100%.

## MARKET SUMMARY:

Equity indices remained strong throughout May with both the S&P500 and the DAX breaking new all-time highs. Investors were less concerned about the negative newsflow coming from Eastern Ukraine and the escalation of the crisis to an open civil war, while the probability of tougher sanctions were gradually priced out from European markets. Economic indicators signaled a mixed picture with US economy regaining strength following the weather related issues, while most of the European macro data remained anemic. The US earnings season delivered mixed results as the S&P500 companies managed to beat the consensus on the bottom line level, but failed to surpass expectations in terms of sales.

Polish market lagged it's regional peers in May and closed the month with in a slight positive territory. Despite of the more constructive sentiment toward regional equities - mainly driven by the easing tension in Ukraine - Polish stocks suffered from ongoing outflow from equity mutual funds. Moreover pension funds flow was concentrated to foreign equities again, which is still far below the maximum limit set by the regulator. On sector level, chemicals led the gain mainly thanks to the performance of Grupa Azoty, while oil&gas showed the worst performance.

## ASSET ALLOCATION OF THE FUND ON 05/31/2014
