Total Net Asset Value of the whole Fund:	7,755,562,747 HUF
Net Asset Value of TRY series:	1,452,503 TRY
Net Asset Value per unit:	1.281027 TRY

## INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Turkish equity market, and to profit from Turkey's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the stock exchange-traded shares of companies that maintain an active presence in Turkey, or that generate a substantial proportion of their revenues in the Turkish market. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. When determining the weights, within the equity investments, of shares traded in the Turkish market, we aim to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

## MARKET SUMMARY:

Equity indices fluctuated near all time high levels throughout June on rather mixed news flow. The crisis in Ukraine escalated further to an open war, while Iraq also witnessed massive military conflicts as sunni insurgents seized control of larger cities. The FED went on with downsizing its QE programme in line with expectations, while the ECB announced a new set of LTRO also mentioning potential QE programmes, which boosted the performance of the periphery assets. China macro data showed early signs of stabilization in June after several months of continuous deceleration.. Crude oil spiked to 1-year high buoyed by the military conflicts in Iraq. In the Turkish equity market the momentum broke in line with the increase in energy prices. The valuation of the market is not attractive now. However the GDP growth expectations improved, the confidence indices showed more gloomy picture. The uncertainty in connection with the imminent election had an effect on the performance of the equity market as it is still a question if the market friendly economy minister and the CBT governor can hold its current position.
