Net Asset Value of HUF series:	2,192,596,202 HUF
Net Asset Value per unit:	2.489546 HUF

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Turkish equity market, and to profit from Turkey's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the stock exchange-traded shares of companies that maintain an active presence in Turkey, or that generate a substantial proportion of their revenues in the Turkish market. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. When determining the weights, within the equity investments, of shares traded in the Turkish market, we aim to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

The global equity rally lost steam in July with several equity indices retreating from major tops during the second half of the month. Ukraine was once again in focus as the crisis intensified with the downing of the Malaysian plane. The further round of EU and US sanctions imposed on Russian economy proved to be the first ones materially affecting key sectors and listed companies. The set of US macro data published in July remained solid, while the FED went on with downsizing its QE programme in line with expectations. The US earnings season painted a relatively healthy picture compared to consensus estimates, while European companies once again failed to surpass expectations on the revenues level, which kept supporting the outperformance of US indices compared to European equities - the latter also negatively affected by Russian sanctions.

The Turkish equity market outperformed the global markets, where the correction has started already. The reason of the outperformance is the outflow from Russia, which flowed into the Turkish market. The GDP growth expectations grew despite the fact that PMI is under the 50 level threshold. Primarily the banking sector performed well. Investors expect moderate rate cut period.

ASSET ALLOCATION OF THE FUND ON 07/31/2014
