Total Net Asset	
Value of the whole Fund:	10,896,491,867 HUF
Net Asset Value of EUR series:	314,922 EUR
Net Asset Value per unit:	3.785029 EUR

INVESTMENT POLICY OF THE FUND:

The objective of the fund is to invest in Central and Eastern European equities. The fund is offered for investors who would like to benefit from the long term performance of regional listed companies. The average equity exposure of the fund is 95%. A primary consideration when compiling the fund's portfolio is the need to optimize the aggregate risk of the securities to be included in the fund. In the interest of reducing the risk, the utmost care is taken when selecting the securities to include in the fund's portfolio. The fund buys shares issued by corporations from countries in the Central European region (primarily Hungary, Poland, the Czech Republic, Romania, Slovenia and Croatia, and secondarily, Austria, Russia and Turkey), but it may also invest in the shares of companies in other emerging and developed countries, as well as in other collective investment securities. The fund may hedge a part or all of its currency risks with forward currency positions. To ensure liquidity the fund aims to hold in its portfolio the government securities on behalf of the State of Hungary and bonds issued by the National Bank of Hungary, but in accordance with the statutory regulations the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

The global equity rally lost steam in July with several equity indices retreating from major tops during the second half of the month. Ukraine was once again in focus as the crisis intensified with the downing of the Malaysian plane. The further round of EU and US sanctions imposed on Russian economy proved to be the first ones materially affecting key sectors and listed companies. The set of US macro data published in July remained solid, while the FED went on with downsizing its QE programme in line with expectations. The US earnings season painted a relatively healthy picture compared to consensus estimates, while European companies once again failed to surpass expectations on the revenues level, which kept supporting the outperformance of US indices compared to European equities - the latter also negatively affected by Russian sanctions.

The worst performing index was the Hungarian BUX last month. MOL, OTP and Richter were among the laggards and contributed to the loss the most. Polish market outperform its regional peers but closed the month in a negative territory again. The PMI continued to drop to 49,4 in July, retail sales was lower than expectations again and inflation remained very low. The pension fund reform - the main important factor of demand/supply balance - ended at the end of the month. According the estimations, more people opt to stay at OFE than previously expected. This is obviously good news for Polish equity market. Only telecom and chemicals can reach positive performance during the month. Jeronimo Martins was among the worst performers mainly due to the disappointing 2Q results.

ASSET ALLOCATION OF THE FUND ON 07/31/2014
