Total Net Asset Value of the whole Fund:	5,624,888 EUR
Net Asset Value of EUR series:	3,633,679 EUR
Net Asset Value per unit:	0.008338 EUR

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

MARKET SUMMARY:

Equity markets closed a rollercoaster month starting with steep declines followed by a solid recovery during the second half of August. The newsflow was once again about the further escalation of the crisis in Ukraine. European markets were hit hard on fears of sluggish growth outlook also exaggerated by sanction related worries and anaemic corporate earnings. US equity markets showed more resilience as the S&P kept outperforming the German DAX on solid macro data and substantially healthier corporate earnings trends. Chinese equities also showed relative strength amid the selloff, primarily supported by attractive valuations in historical terms. The Euro depreciated further against the USD hitting 12-month lows, while precious metals edged lower in USD terms. Regardless of the ongoing military conflicts in Iraq, crude prices remained under pressure due to fears of sluggish growth prospects throughout Europe.

Climate related equities showed mixed performance in August with waste and agricultural related stocks materially outperforming, while alternative energy was lagging behind.

ASSET ALLOCATION OF THE FUND ON 08/31/2014
