Total Net Asset Value of the whole Fund:	7,245,378,621 HUF
Net Asset Value of PI series:	126,128 PLN
Net Asset Value per unit:	1.261278 PLN

INVESTMENT POLICY OF THE FUND:

The fund aims to share in the yields of the Turkish equity market, and to profit from Turkey's economic growth through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the stock exchange-traded shares of companies that maintain an active presence in Turkey, or that generate a substantial proportion of their revenues in the Turkish market. When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. When determining the weights, within the equity investments, of shares traded in the Turkish market, we aim to ensure that the fund - in line with our expectations with regard to future risks and yields - achieves its objective, which is to outperform the benchmark advertised by the fund, over the longer term. The fund records its assets in forint; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements. Under the current legislation the proportion of shares in the portfolio may be up to 100%.

MARKET SUMMARY:

Equity markets closed a rollercoaster month starting with steep declines followed by a solid recovery during the second half of August. The newsflow was once again about the further escalation of the crisis in Ukraine. European markets were hit hard on fears of sluggish growth outlook also exaggerated by sanction related worries and anaemic corporate earnings. US equity markets showed more resilience as the S&P kept outperforming the German DAX on solid macro data and substantially healthier corporate earnings trends. Chinese equities also showed relative strength amid the selloff, primarily supported by attractive valuations in historical terms. The Euro depreciated further against the USD hitting 12-month lows, while precious metals edged lower in USD terms. Regardless of the ongoing military conflicts in Iraq, crude prices remained under pressure due to fears of sluggish growth prospects throughout Europe.

The Turkish equity market underperformed the emerging markets during the month. The market priced in the victory of Erdogan before the presidential election and then the uncertainty concerning the prime minister election marked the sentiment.
