Currency:	EUR
Total Net Asset Value of the whole Fund:	5,624,779 EUR
Net Asset Value of EUR series:	3,526,543 EUR
Net Asset Value per unit:	0.008231 EUR

INVESTMENT POLICY OF THE FUND:

The aim of the fund is to profit from the return on climate change-related equity market investments, through share price gains and dividend income. Given the risk profiles of the equity investments, the fund is classified as a high-risk investment. The fund manager's intentions are that the fund's portfolio should consist predominantly of the publicly traded shares of foreign-domiciled companies. The primary investment targets are the securities of companies that earn most of their revenues from exploiting the business opportunities arising from global climate change (environmental management, energy efficiency, clean technologies etc.), harnessing alternative resources (renewable energy, water management, agricultural chemistry etc.) and from agricultural activity (biotechnology, animal husbandry, fish farming, agricultural technology, etc.). When building the fund's portfolio, beyond the minimum statutory requirements, the principles of safety and maximum diversification (the spreading of risk) are observed. Accordingly, the fund primarily buys publicly issued foreign securities that are listed on foreign stock exchanges, and secondarily, it may also invest in shares issued by Hungarian companies. The fund management company, exercising all due care, determines the means of utilising the fund's resources on the basis of its own judgement and decisions, while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation and by taking into account the macroeconomic environment of the investment markets, relying primarily on fundamental analysis. When compiling the portfolio, it is shares that determine the nature of the fund, and thus the proportion of shares that may be held in the fund at any given moment may reach the prevailing statutory maximum. The proportions, within the equity investments, of subsectors related to climate change, alternative energy sources and agricultural activity are determined so as to ensure that the fund - in line with our expectations with regard to future risks and yields - fulfils its objective, which is to outperform the thematic global sector index selected as the benchmark over the longer term. The fund records its assets in euro; the fund management company may, at its own discretion, choose to hedge all or a part of its currency risks with forward currency positions, in compliance with the applicable statutory requirements.

MARKET SUMMARY:

Equity markets continued to fluctuate around historical highs throughout September. Once again the S&P 500 managed to break new all-time records fuelled by solid corporate earnings revision trajectories and the exceptional strength of the US economy. European indices, on the other hand, kept underperforming US ones as anemic growth prospects weighed on equity prices. China macro data also continued to disappoint with softer PMIs and a set of deteriorating underlying economic activity indicators published. With US interest rate hikes on the horizon and the ECB in the easing phase, the USD surged against all major currencies, particularly the EUR. Commodities tumbled across the board from crude prices to industrial metals, basic materials and precious metals due to the pressure stemming from the enormous USD appreciation and the weak European and Chinese growth outlook. Climate change related equities performed mixed in September. Utilities and water related stocks showed solid performances, while renewables and commodity related food sectors proved to be less resilient.
