Total Net Asset Value of the whole Fund:	23,686,049,631 HUF
Net Asset Value of HUF series:	5,574,006,143 HUF
Net Asset Value per unit:	1.434477 HUF

INVESTMENT POLICY OF THE FUND:

The fund's investment objective is to provide investors with a higher return than that attainable in the domestic money market, primarily by investing in the bond market of the Central and Eastern European region. The fund's bond investments are mainly concentrated in the corporate and mortgage bond markets, but government securities issued in foreign currency are also potential investment targets. Forint-denominated Hungarian government securities are only held for liquidity management purposes. The fund may also buy into other investment funds that invest in the above markets. The achievement of a higher return than would be attainable in the Hungarian government securities market is made possible by the better diversification, the additional yield from the premiums of the bonds, and, in a favourable market environment, by the price gains resulting from the narrowing of the premiums. The fund's general risk level and the asset allocation between the three main areas of investment is determined on the basis of a regular market analysis and situational analysis relating to four main aspects (fundamentals, valuation levels, market sentiment, technical factors). The in-depth analysis is also an important factor in the selection of the individual securities by region, sector and interest risk. In the course of selecting the individual securities, a thorough financial analysis is also essential to determine the creditworthiness of the issuer. Risk management and the regular monitoring of the issuers are of key importance to the fund. When compiling the fund's portfolio we aim to achieve a moderate risk profile, primarily purchasing investment-grade securities. The fund only buys lower-rated instruments in limited proportions. The fund may only conclude derivative transactions for the purpose of hedging or ensuring an efficient portfolio structure. The fund may also hold unleveraged collective investments linked to derivative indexes. The fund also has the option of taking on a substantial currency exposure, which will ordinarily be fully hedged, although depending on market circumstances the fund may even have an open currency position. The fund management company, exercising all due care, based on its own judgement and decisions, and while observing the relevant legal provisions and the limitations stipulated in the Fund Documentation, determines the means of utilising the fund's resources, and the weights of the various investments within the portfolio, with a view to ensuring that the fund - in line with our expectations with regard to future risks and returns - achieves its objective in the long term.

Risk and Reward Profile:

MARKET SUMMARY:

Equity markets became rather volatile during October. Slowdown of the global growth and Greece's announcement of its exit from the IMF's bailout programme until the end of this year generated a significant panic among investors. In the first half of October, developed market equities lost 6% of their values on average. Fed made an announcement about putting an end to its QE program and stopping the expansion of its balance sheet. As the US revealed its plan the Bank of Japan almost immediately made an unexpected monetary easing step which gave fuel to risky assets to rocket above their all time high levels once again. Due to this movement the developed market equities got the chance to regain their previous huge losses and managed to close the month at positive territories. 10 year US Treasury Bond's yield declined from 2,5% to 2,1% and closed at 2,34% at the month's end. As the other risky assets, the EM bonds were not also capable of staying resilient during the deterioration of global sentiment. Yield spreads have widened 27 bps on average, where from they were capable to make a correction and finish the month with a slight widening of 6-11 bps.

ASSET ALLOCATION OF THE FUND ON 10/31/2014
